

ERO SRL

ERO PRESENTS HIS NEW GLUE DETECTOR SYSTEM

SIMPLE, INTUITIVE, FAST, VERY RELIABLE AND COMPATIBLE WITH EVERY KIND OF ADHESIVE DISPENSING EQUIPMENT

ERO camera glue-detection system, is easy to use and very reliable. In a few steps the system is ready to work assuring a perfect checking on each produced glued box.

A well glued box must be run under the glue detection camera and through an auto-learning system the device takes a picture of this good sample. This sample is a box with a correct gluing pattern, which is accepted by the operator. The picture of this correct glued box will be memorized and constantly compared by the system to all the other boxes which run through the machine. The glued box acquired through the auto-learning system will be the sample of which all the other boxes must be compared to. If the other glued boxes which run in the machine are not the same in terms of volume and/or position, as the accepted sample, the system will recognise these different boxes as wrong. This means that the glue pattern must be exactly the same on each produced box within the tolerance frame. After the recognition of the wrong boxes the glue detection system is able to mark or kick or extract the wrong boxes through the specific devices.

ERO S.r.l. is a leading company specialized since 1994 in the production of electronic gluer systems for compact and corrugated cardboard boxes.

Our company is well known since many years in the field of the cardboard industry for its reliability and its long lasting gluer systems and is present on the national and foreign market, being the supplier of the most prestigious manufacturers of folding machines and casemaker.

We are known and appreciated by our customers for the standing technical assistance we guarantee, not only in the first step of installation, but also in any occasion it would be requested by the customer.
