

PNEUMATIC SHAFTS SNC

PNEUMATIC SHAFTS: EASIER JOB= MORE PRODUCTION

Manufacture of expanding, self-centring shafts with independent air-chambers, made of polyurethane and fitted with supports having pneumatic closing, after-sales consulting and assistance service.

By taking part in CONVERFLEX 2009, we aim at opening new horizons to the sectors where the processing and converting of any material involves reel unwinding and rewinding. We will exhibit our full product range, including 3" and 6" expanding shafts made of steel and aluminium, up to rubber sleeves and supports for rewinders and unwinders.

Our shafts are manufactured very accurately, they are equipped with air-chambers of polyurethane, a much more resistant, more durable and tighter material than conventional rubber, and require less maintenance.

In addition, the 6" shafts are self-centring and fitted with independent air-chambers purposely developed to reduce the risk of breaking, to increase shaft durability and to avoid useless downtimes.

We are aiming at designing and developing devices capable of diminishing maintenance costs and increasing the durability of our products, which will result in a considerable cost decrease for our customers, as well as in a significant production growth.

At the exhibition we are going to present some novelties like the supports for expanding shafts with pneumatically operated closing and opening, purposely designed to facilitate the shaft assembling and disassembling by means of a compressed-air gun, which has the benefit to reduce the operator's work.

Pneumatic Shafts snc are the result of a forty-year expertise in the sector of expansive shaft, and similar product, designing and manufacture.

Our company can offer a range of highly qualified products at top quality standards. Moreover, as we have simplified the production processes, we can ensure an excellent quality/price ratio to a more and more demanding market.

We are ready to meet the most peculiar requirements of the flexo, papermaking and textile industry. Therefore, Pneumatic Shafts stand for reliability and excellent performances.
