

## **RABBI & C SOLVED SRL**

### **QUALITY AND INNOVATION FOR MORE THAN FORTY YEARS**

Rabbi & C. Solved goes on and on the road of innovation and quality that began in 1967. After being the leading Italian company for solvents and thinners either in Nitro or in Offset and Flexography sectors, now is ready to strengthen its presence on the market adding new specialties to its portfolio. Some auxiliary products for the press room are already available and have received a warm welcome from the clients. Among them we point out:

**GEL RIGENSOL**; Gel product for the total cleaning, rejuvenation and decalcification of ink rollers. After cleaning, the ink rollers are free from residual inks, mineral salts and oxidation marks. They are ready for color change too

**CLEAN CHAIN**; Exclusive spray product for sheet fed machines. It dissolves the mixture of anti set-off powders and grease that form in the chains of the sheet exit. One spray is enough to immediately dissolve white sludge.

**ANTIESSICCANTE**; this spray avoids ink skinning on rollers and in the ink-pot. Very useful during long machine standstills. Essential when work is interrupted at the end of the day

A big effort was to the development of a new generation of damping solutions either for roto offset or for sheet fed machines. These products can be used with alcohol, VIVAFOUNT 33, or without it, VIVAFOUNT 38, and in presence of hard or softened water.

Finally new projects are in the development and pre- production phase and are finalized to obtain a new rubber rollers cleaning agent VOC free and eco friendly, and water based solvents for Nitro sector.

*Rabbi Solved produces Thinners and Solvents for Nitro, Offset and other printing techniques since 1967. The business unit dedicated to lithography, flexography, rotogravure, roller and serigraphy has brand name VIVASTAMPA. Nitro thinners for professional-use and Do-It-Yourself are unified under EASYSOL brand name. In 1999 Rabbi Solved obtained the ISO 9002:1994, and then the ISO 9001:2000, which ratified all the previously achieved merits, as a result of our corporate philosophy and attitude. In 2003 the company, which by then played a leading role in the Italian market, extensively developed a product range for the printing industry by introducing damping additives, special products, auxiliary devices for offset machines and solvents for photopolymer engraving. In 2007 Rabbi Solved has completed two new unique automated production plants, respectively designed to produce water-miscible lithography solvents and to have fractioned simultaneous component dosage directly in the packages, which guarantees the highest reproducibility and a remarkable flexibility*
